(54) Title: MOUNTING ARRANGEMENT FOR THE INTERNAL DIVIDING ELEMENTS OF REFRIGERATORS AND FREEZERS

(57) Abstract: A mounting arrangement for the internal dividing elements of refrigerators and freezers, which comprise a compartment (C) having two lateral walls (14), each carrying at least one rail (20) on which is slidably seated an adjacent lateral portion (30) of an internal dividing element (E) to be horizontally displaced between a first position, in which it is retracted inside the compartment (C), and second positions, in which it is partially displaced forwardly and outwardly from the compartment (C). According to the invention, each rail (20) comprises a flat horizontal upper track (23) and a lower track (24), each lateral portion (30) of the internal dividing element (E) comprising a seating surface (31), to be slidably seated on the upper track (23) of the respective rail (20), and a retaining surface (32) disposed below the lower track (24).
